

DIS CONFERENCE SYSTEMS

For small meetings, council chambers, boardrooms to the largest Parliament and beyond.

DIS CDS4000 Conference Discussion System

The CDS4000 comes from one of the world's leading manufacturers of conference products, Danish Interpretation Systems (DIS). The CDS4000 is microprocessor based and features a single cable topology suitable for a broad variety of installed and portable applications.

More than 40 years of experience has been put into the system to ensure top performance combining superior sound quality, strong mechanical construction and an elegant state of the art styling. The simple "daisy-chain" cable configuration makes set-up simple, easy and fast. Easy to use "Press to speak" or "Request to speak" switches make operation a breeze while a "Priority" and "Delegate off" functions on the chairman units ensures trouble free, controlled meetings.

The CDS4000 system is made up of the following components:

- CM4410P** Chairman unit with gooseneck mic, loudspeaker and 2m cable
- DM4410P** Delegate unit with gooseneck mic, loudspeaker and 2m cable
- CU4005** Power Supply/Network Controller (powers up to 50 mic units)
- MC4000** Optional Desktop Microphone Control Unit

The CU4005 power supply/network controller includes an LCD screen and simple to use front panel controls for easy adjustment of volume levels and the mode of operation. An optional serial control card can be fitted to the CU4005 for control of the system via a PC and/or an AMX or Crestron style control system which opens up possibilities for a wide range of functions including touch screens and camera control.

Via the optional software package, names can be assigned to delegates and controls can be positioned on screen to match the room layout. Additionally, a timer function, speakers log and database for downloading are also available as part of the software package.

The CU4005 power supply/network controller also has provision for connection to and from external mixers, tape recorders and audio processors (equalisers etc).

The DIS CDS4000 is an extremely flexible, simple to use world class conference system that is a standard throughout Europe and Asia, yet is surprisingly affordable.
